Package details

Save draft | Next

Some fields require your attention. Please update the fields.

Specify one package URL for each architecture that your application supports. When a customer downloads your application, the Store will download the appropriate installer based on customer device architecture.

Package URL* Learn more

Provide a versioned, secure URL for your standalone .exe or .msi installer package. To distribute an updated version of your application, you can update your versioned URL and submit it here.

Example: https://www.contoso.com/contosoapp/downloads/1.1/setup.exe

Enter here

Package URL should begin with https:// and should point to a versioned, downloadable package.

Architecture* Learn more

Select your application architecture.

Select an architecture.

- x86
- x64
- neutral
- arm
- arm64

Installer parameters* Learn more

Provide any switches required for silent installation, such as /s, specific to your installation package.
